

Silver One Resources Inc.

Management's Discussion and Analysis for the year ended December 31, 2017

This Management's Discussion and Analysis ("MD&A") for the year ended December 31, 2017, prepared as of April 23, 2018, should be read in conjunction with the audited consolidated financial statements for the year ended December 31, 2017 of Silver One Resources Inc. (the "Company" or "Silver One"), which have been prepared in accordance with International Financial Reporting Standards ("IFRS"). All amounts included in this MD&A are expressed in Canadian dollars unless otherwise indicated.

These documents and other information relevant to the Company's activities are available for viewing on SEDAR at www.sedar.com or on the Company's website at www.silverone.com.

COMPANY OVERVIEW

Silver One was incorporated pursuant to the provisions of the Business Corporations Act (British Columbia) on June 8, 2007.

The Company's principal activities include the acquisition, exploration and development of mineral properties. On September 26, 2016, the Company completed the acquisition of all issued and outstanding shares of KCP Minerals Inc. ("KCP"), a subsidiary of First Mining Finance Corp. ("First Mining"), and after this transaction holds three Mexican silver projects: Peñasco Quemado in the state of Sonora, La Frazada in the state of Nayarit, and Pluton in the state of Durango. The Company also entered into an option agreement to acquire a 100% interest in the Candelaria Silver project (the "Candelaria Project") located in Nevada and has staked claims in eastern Nevada.

COMPANY HIGHLIGHTS

Current highlights (including subsequent events up to April 23, 2018) include:

Additional Candelaria claims acquired

In March 2018, the Company entered into an agreement to acquire 10 non-patented mineral claims located along the eastern structural projection of the Candelaria mineralized system. These claims are located immediately east of the former producing Mount Diablo open pit. Silver One has acquired these claims for the consideration of USD\$10,000 plus the issuance of USD\$10,000 in Silver One shares at the market price based on TSX Venture Exchange approval.

Financing

On October 23, 2017, the Company closed private placement by issuing 10,750,001 units ("Units") at a price of \$0.40 per Unit for gross proceeds of \$4,300,000 (the "Financing").

Under the Financing, each Unit is comprised of one common share of the Company and one-half of one transferable common share purchase warrant (each whole warrant, a "Warrant"). Each Warrant will entitle the holder to purchase one additional common share of the Company at \$0.60 per share for a period of three years from the date of issue.

Option agreement with SSR Mining Inc. to acquire 100% interest in the Candelaria Mine Project, Nevada

On January 16 2017, the Company entered into an Option Agreement ("Option Agreement") with a subsidiary of SSR Mining Inc. ("SSR") (formerly Silver Standard Resources Inc.), to acquire a 100% interest in the Candelaria Project located in Nevada.

In order to exercise the option, Silver One will be required to:

- issue USD \$1,000,000 in shares to SSR on the date that the parties satisfy the conditions to the Agreement, including obtaining final approval of the TSX-V (the "Effective Date") (paid);
- issue an additional USD \$1,000,000 in shares on each of the three anniversaries of the Effective Date; and
- assume the reclamation bond on the property immediately prior to exercise of the option.

Silver One Resources Inc.

Management's Discussion and Analysis for the year ended December 31, 2017

In order to satisfy the initial option payment of USD \$1,000,000, the Company issued 1,332,900 common shares at a price of \$1.00 per share.

On January 24, 2018, the Company announced the completion its first anniversary payment to SSR Mining by issuing 2,828,636 shares at a deemed price of USD\$ 1.0 million.

Upon satisfying the terms set forth above, the Company will earn a 100% interest in the property subject to a 3% net smelter returns royalty payable to Teck Resources USA on production from a certain claims group of the property and a charge of \$0.01 per ton payable for waste rock dumped on certain claims.

The Company has received permitting from the Bureau of Land Management ("BLM") to commence drilling of the historic leach pads at its past-producing Candelaria silver project in Nevada. These heaps were partially processed by Nerco then Kinross during the open pit operations in the 1970's through 1990's. SSR's historic resource on the heaps amounts to just over 48 million ounces of silver averaging 1.29 oz/t (~40 g/t) silver. Silver One's goal is to evaluate the grade, distribution and potential metallurgical recovery of the silver for a leach reprocessing of the historic heaps. A production decision would be based upon the results of the metallurgical testing and required technical and economic studies.

MINERAL PROPERTIES

USA

Candelaria, Nevada, United States

The Candelaria Mine is located in central west Nevada just off the paved Highway 95, which connects Las Vegas with Reno. The past producing mine site is serviced by paved road, power and water. Reclamation of the Candelaria Mine has been ongoing since 1998. The mine dumps were re-contoured and seeded, and the heap leach piles were rinsed with fresh water and seeded. Other infrastructure has been removed, and the substantial reclamation work meets all state and federal guidelines.

The project lies within the Candelaria Mining District, historically the richest silver mining district in Nevada. Estimated production from the late 1880's to 1954 was 22 million ounces of silver. From 1874 to 1883, the Northern Belle Deposit alone produced high grade lodes averaging 1,700 – 2,000 g/t (50 – 60 oz/t) silver. Open pit mining between 1980 and 1999 resulted in the production of 47 million ounces of silver, with Kinross Gold producing approximately 13 million ounces of that between 1994 and 1999.

SSR completed a large drilling program prior to acquiring the project in 2001, and commissioned a technical resource report titled "Candelaria Project Technical Report" dated May 24, 2001 (filed on SEDAR on June 20, 2002), prepared by Pincock Allen & Holt. Historical resources as outlined in the report amount to approximately 44 million ounces of silver in the Measured and Indicated categories with an additional 82.8 million ounces of silver Inferred. See section titled "Cautionary Note on Historical Resource Estimates".

Silver One entered into a 3-year option agreement with SSR (announced on January 17 and 23, 2017) whereby Silver One issued 1,332,900 Silver One common shares worth USD \$1,000,000 upon TSX-V approval of the option agreement (January 23, 2017). On January 24, 2018, the Company announced the completion its first anniversary payment to SSR Mining by issuing 2,828,636 shares at a deemed price of USD\$1,000,000. It is further obligated to issue an additional USD \$1,000,000 worth of Silver One shares upon each of the two subsequent anniversaries and assume the reclamation bond on the property immediately prior to exercise of the option. Upon completion of the option agreement, Silver One will have earned 100% of SSR's interest in the property, subject to a 3% net smelter returns royalty payable to Teck Resources USA on production from a certain claims group of the property and a charge of \$0.01 per ton payable for waste rock dumped on certain claims.

Silver One Resources Inc.

Management's Discussion and Analysis for the year ended December 31, 2017

Silver One's goal is to re-evaluate all of the resources, including reprocessing silver from the historic leach pads. It will also explore for potential down-dip, high-grade extensions to the system. Drilling completed by SSR partially delineated some of these deeper targets, but the testing of their full potential has not been completed. Additionally, as indicated by historic workings throughout the area, Silver One will examine the potential for increasing the extent of the mineralized system along strike in both directions from the historic open-pits.

As announced on October 31, 2017, the Company received permitting from BLM to commence drilling of the historic leach pads at Candelaria. On Jan 3, 2018, the Company announced the completion the sonic drilling program on the historic heaps, stock piles and waste dumps. The Company drilled approximately 1,110 metres in 45 holes to produce 730 samples. These samples were dried, split and a portion sent for assaying. Upon receipt of all assay data, the Company will prepare composite samples for metallurgical testing to determine recoveries of silver for the potential reprocessing of silver from the historic leach piles.

Surface exploration to assess the mineral potential along-strike outside the areas of the old pits continues. The Company has also undertaken the process of claim consolidation through acquisitions and staking.

Mexico

Peñasco Quemado, Sonora, Mexico

Peñasco Quemado, is located in northern Sonora, 60 km south of the town of Sasabe on the US-Mexican border and comprises 3,746 hectares in seven concessions.

A 2006 drilling program outlined a historical measured and indicated resource of 2.57 million tonnes at a grade of 117 g/t Ag for a silver resource of 9.63 million ounces (Technical Report filed on SEDAR on Jan. 9, 2017). The silver mineralization is associated with manganese and barite oxides in a near surface shallow westerly dipping zone of polymictic conglomerate in the northern part of the deposit and in stockwork quartz and manganese oxides in a rhyolite dome in the southern part of the deposit. See "Cautionary Note on Historical Resource Estimates".

The historical resource has been traced along a 450m strike length and drilling to date has been relatively shallow, less than 100m deep, mainly focused on the silver-bearing conglomerate. Soil sampling over the entire property was conducted in late 2016 with results announced on March 1, 2017. Highly anomalous soil values in manganese and barium along with lead and zinc are associated with the historic resource area and extend the potentially mineralized system for an additional 2.6 km to the southeast. As well, a second large anomalous area was outlined by the soil program in the western area of the property, an exploration target area that has never been systematically explored.

The geochemical results at Peñasco Quemado are very encouraging as they put in perspective a much larger upside potential to the property than was previously understood. These two standout exploration targets defined by highly anomalous zinc, lead, barium and manganese values not only extend the prospective strike length of the mineralized system from the 450 meters associated with the Historic Resource to over 3,000 meters, but the association with strongly elevated zinc and lead values suggests the possible presence of other buried zinc and lead +/- silver bearing mineralized systems at depth. This geochemical signature bears strong similarities to the silver-manganese oxide and deeper zinc-lead-silver sulphide deposits currently being successfully evaluated by Arizona Mines at their Hermosa and Taylor projects in Arizona. Further exploration is clearly warranted.

The Company has also completed a CSAMT geophysical survey over the property. When results are fully compiled it will aid in the future direction with respect to ongoing exploration;

Silver One Resources Inc.

Management's Discussion and Analysis for the year ended December 31, 2017

La Frazada, Nayarit, Mexico

La Frazada is located approximately 300 km northwest of Guadalajara and hosts silver rich epithermal veins with base metals. The 299-hectare exploration concession lies within the western foothills of the Sierra Madre Occidental. Access is good, being only a few kilometers from the main coastal highway with average elevations less than 200m above sea level.

La Frazada was mined in the late 1890's by an English company, with the Mexican revolution effectively stopping all activity by 1910. A small ornate smelter stack is all that remains of that early historical production. Two parallel quartz veins with galena and sphalerite have been traced for over 1800m along strike and host mineralization in three known mineralized shoots. A 2008 NI 43-101 Technical Report (filed on SEDAR on Jan. 9, 2017) calculated a historical measured and indicated resource totaling 583,000 tonnes at 250 g/t Ag, 0.87% Pb, and 2.44% Zn; historical inferred resources are an additional 534,000 tonnes at 225 g/t Ag, 0.92% Pb, and 2.62% Zn. These resources are near surface and within the existing mine workings. See "Cautionary Note on Historical Resource Estimates".

A property wide soil sampling program was completed in late 2016, with results announced on March 1, 2017. The results reveal lead-zinc-copper and antimony anomalies that correlate with known mineralized veins. Portions of the veins however, do not show contrast with background values. The tropical weather of Frazada has leached silver and to some extent other elements such as zinc and copper that are more easily detectable in dry weather. Thus, the vein is not easily visible with the soil geochemistry. Despite such limitations, certain elements are useful to identify the veins and delineate extensions of the mineralized trends. Antimony, for example, roughly correlates with the Jabalina East vein. Lead, zinc and copper roughly correlate with the Frazada vein in the eastern part of the property and indicate that the vein extends an additional 300 meters to the west.

A drilling program targeting deeper levels of the projected ore shoots has never been undertaken, but could appreciably add to the resource. Additional resources could also exist along strike, outside the areas of the underground workings. For more detailed information, please review the NI 43-101 report.

At December 31, 2017, an impairment indicator test was performed by reviewing the individual property for impairment indicators. It was identified that there were indicators of impairment and that an impairment test was required on La Frazada, primarily as a result of low historical exploration expenditures and lack of budgeted or planned expenditures. The impairment test performed determined that the recoverable amount exceeded the carrying amount of the property as at December 31, 2017, and that no impairment was required.

Pluton, Durango, Mexico

Pluton is a 6,534-hectare property comprised of 3 contiguous exploration concessions. It is strategically located within the historic "Ojuela-Mapimi Mining District" and lies along the eastern front of the Sierra Madre Oriental in northern Durango.

Exploration targets at Pluton are silver-lead-zinc carbonate replacement deposits, which may lie beneath the shallow alluvial cover. The property lies adjacent to and just north of the famous Mapimi Mining District, and west of Excellon's (TSX: EXN) Platosa mine, an active silver producer with grades greater than 1000 g/t AgEq. Aeromag and ZTEM surveys show that Pluton, Platosa and the Mapimi districts all lie on the edge of a 25km long buried intrusion, which does not outcrop.

These geophysical surveys, along with geochemistry and IP, resulted in a 3,900 m diamond drill program in 2011 aimed at testing for high grade carbonate replacement mineralization in the favourable limestone horizon marginal to the intrusives. All holes encountered silver-lead-zinc mineralization in veins in a shale hornfels overlying the carbonate horizon, but none of the holes passed into the host carbonate rocks. This vein mineralization is interpreted as leakage into the nonreactive hornfels from the intrusion and/or carbonates

Silver One Resources Inc.

Management's Discussion and Analysis for the year ended December 31, 2017

below. The high-grade target of silver-rich massive sulfides could lie at the contact of the limestone and the downward projection of the mineralized fractures seen in the hornfels.

An ancillary advantage to the district is that the Peñoles Torreon smelter is only 50km away, and transport and power infrastructure is excellent.

At December 31, 2017, an impairment indicator test was performed by reviewing the individual property for impairment indicators. It was identified that there were indicators of impairment and that an impairment test was required on Pluton, primarily as a result of low historical exploration expenditures and lack of budgeted or planned expenditures. The impairment tests resulted in the carrying value at December 31, 2017 exceeding the recoverable amount of \$31,000. This resulted in a writedown on the property of \$1,069,799.

Cautionary Note on Historical Resource Estimates

Historical Resource Estimate on Peñasco Quemado

Silvermex completed a NI 43-101 Technical report outlining the following historical resource estimate as set forth below.

Resource Category (Underground)	Mineral Type	Tonnes (Mt)	Ag (g/t)	Ag (Moz)
Measured	Oxides	0.12	152	0.60
Indicated	Oxides	2.44	115	9.03
Total M + I	Oxides	2.57	117	9.63
Inferred	Oxides	0.10	41	0.13

Silvermex Resources Limited reported in a technical report titled "Updated NI 43-101 Technical Report and Resource Estimate for the Peñasco Quemado Silver Property" dated March 9, 2007 (filed on SEDAR on March 16, 2007), prepared by William J. Lewis and James A. McCrea, the above historical mineral resource estimate. The historical mineral resource estimate used "measured mineral resource", "indicated mineral resource" and "inferred mineral resource", which are categories set out in NI 43-101. Accordingly, the Company considers these historical estimates reliable as well as relevant as it represents a target for exploration work by the Company. The data base for the historical resource estimate consisted of 24 reverse circulation holes from a 1981/82 program, 17 reverse circulation holes from a 2006 program and 8 diamond drill holes from a 2006 drill program. Assay data was available for all 49 of the drill holes and 12 trenches. The mineral resource estimate used a kriging estimation method to establish ore zones with a cut-off grade of 30 g/t Ag and assay's capped at 700 g/t Ag. Resource blocks were estimated by ordinary kriging with samples within a search radius of 25 meters classified as a measured mineral resource, within 47 meters classified as an indicated mineral resource and within 70 meters classified as an inferred mineral resource. As required by NI 43-101, CIM definitions (August, 2004) were used to classify mineral resources with the classification of each kriged ore block dependent upon the number of penetrating holes. An in-situ block density of 2.50 t/cu meter was assigned the ore blocks. The qualified person has not done sufficient work to classify the historical estimate as a current mineral resource therefore the Company is treating these historical estimates as relevant but not current mineral resources.

Historical Resource Estimate on La Frazada Property

A NI 43-101 Technical Report prepared for Silvermex Resources Ltd. ("Silvermex") outlined a historical measured resource comprised of 2.54 million ounces, averaging 260 g/t silver, a historical indicated resource comprised of 2.16 million ounces, averaging 241 g/t silver, and a historical inferred resource comprised of 3.86 million ounces of silver, averaging 225 g/t silver.

Silver One Resources Inc.

Management's Discussion and Analysis for the year ended December 31, 2017

Resource Category	Tonnes (Mt)	Ag (g/t)	Au (g/t)	Pb (%)	Zn (%)	Ag (Moz)	Au (oz)	Pb (Mlb)	Zn (Mlb)	Cu (Mlb)
Measured	0.30	260	0.20	0.88	2.36	2.54	1,900	5.86	15.78	0.63
Indicated	0.28	241	0.14	0.86	2.52	2.16	1,300	5.30	15.50	0.55
Total M+ I	0.58	251	0.17	0.87	2.44	4.70	3,200	11.16	31.28	1.18
Inferred	0.53	225	0.17	0.92	2.62	3.86	3,100	10.86	30.77	1.05

Silvermex Resources Limited reported in a technical report titled "Technical Report and Preliminary Resource Estimate for the La Frazada Silver Property, El Zopilote Mining District, Nayarit, Mexico" dated November 24, 2008 (amended January 19, 2009) (filed on SEDAR on February 18, 2009), prepared by William J. Lewis, the above historical mineral resource estimate. The historical mineral resource estimate used "measured mineral resource", "indicated mineral resource" and "inferred mineral resource", which are categories set out in NI 43-101. Accordingly, the Company considers these historical estimates reliable as well as relevant as it represents a target for exploration work by the Company. The data base for the historical resource estimate consisted of 729 samples; 233 belonging to the La Jabalina West vein, 384 to the La Frazada vein and 112 samples corresponding to the La Jabalina East-Tiro Real vein. The mineral resource estimate used a block model method with a cut-off grade of 80 g/t Ag, 0.75% Pb and 1% Zn. The qualified person has not done sufficient work to classify the historical estimate as a current mineral resource therefore the Company is treating these historical estimates as relevant but not current mineral resources.

Historical Resource Estimate on Candelaria Project

SSR reported in a technical report titled "Candelaria Project Technical Report" dated May 24, 2001 (filed on SEDAR on June 20, 2002), prepared by Mark G. Stevens, P.G., of Pincock Allen & Holt, the historical mineral resource estimate shown in the table below.

Candelaria Project							
Historical Resource Estimate							
Area/Type	Classification	Tons	Factored Ag Grade (opt Ag _{total})	Sol. Au Grade (opt Au _{soluble})	AqEq Grade (opt AgEq _{total})	Ag Ounces (Ag _{total})	Aq Equiv. Ounces (AqEq _{total})
Mount Diablo	Measured	3,391,000	4.44	0.004	4.67	15,054,000	15,838,000
	Indicated	10,231,185	2.84	0.003	3.01	29,005,000	30,796,000
	Subtot. M + Ind	13,623,000	3.23	0.003	3.42	44,060,000	46,633,000
Mount Diablo	Inferred	5,191,000	2.12	0.003	2.30	11,015,000	11,939,000
Northern Belle		9,162,000	2.26	0.002	2.37	20,661,000	21,714,000
Leach Pads		37,328,000	1.29	---	1.29	48,153,000	48,153,000
L.G. Stockpiles		4,000,000	0.75	---	0.75	3,000,000	3,000,000
	Subtot. Inf.	55,681,000	1.49	0.002	1.52	82,829,000	84,806,000

Silver One Resources Inc.

Management's Discussion and Analysis for the year ended December 31, 2017

- Notes
- 1) Lode resources tabulated at a 0.5 opt Ag_{soluble} cut-off grades, with only Ag_{total} shown in this table.
 - 2) Leach pads and low grade stockpile resources tabulated for entire accumulation of material.
 - 3) Total silver grades factored from soluble silver grades using regression formulas developed by Snowden.
 - 4) Silver equivalent grade includes the contribution from the gold grade (soluble) using an Ag:Au equivalency ratio of 57.8:1.

The historical mineral resource estimate used "measured mineral resource", "indicated mineral resource" and "inferred mineral resource", which are categories set out in NI 43-101. Accordingly, Silver One considers these historical estimates reliable as well as relevant as it represents key targets for exploration work by Silver One. The data base for the historical resource estimate:

- (1) *on the Mount Diablo Deposit consisted of 538 drill holes by previous owners and 10 drill holes by SSR. For drill holes that were twinned, the author used the lower of the two values assigned to the original holes. The mineral resource estimate used a kriging estimation method to establish ore zones with a cut-off grade of 0.5 opt Ag. Ordinary kriging was used to interpolate grades in the block model. The block models were set up with block dimensions of 25 feet by 25 feet in plan and 10 feet in height. The maximum search range used in the higher-grade zone was 235 feet, in the lower grade zone it was 1,000 feet and in the background zone it was 350 feet. Block models more than 300 feet from the nearest composite only constituted 3 percent of the total number of estimated blocks and were assigned to an inferred category,*
- (2) *on the Northern Belle Deposit consisted of 226 drill holes by previous owners, of which a portion of these holes were duplicated for the Mount Diablo Deposit database. The mineral resource estimate used a kriging estimation method to establish ore zones with a cut-off grade of 0.5 opt Ag. The mineral resource estimate used multiple indicator kriging to interpolate grades in the block model. Block models were set up with block dimensions of 50 feet by 50 feet in plan and 20 feet in height. The maximum search range used in the higher-grade zone was 85 feet, in the intermediate-grade zone was 120 feet and the lower-grade zone was 140 feet and in the lower undifferentiated material below the current pit topography was 260 feet. Block models more than 300 feet from the nearest composite only constituted 3 percent of the total number of estimated blocks and were assigned to an inferred category;*
- (3) *on the Leach Pads consisted of 24,633,000 tons located on Leach Pad 1 and 12,695,000 on Leach Pad 2. The estimate for Leach Pad 1 is based on the fact that silver production indicates 51.5% of total silver was recovered by heap leaching operation, while 81.2% of the soluble silver content was recovered. Further, the estimate for Leach Pad 2 is based on the fact that silver production indicates 42.4% of total silver was recovered by heap leaching operation, while 71.3% of the soluble silver content was recovered;*
- (4) *on the Low Grade Stockpile is based on limited and incomplete data and documentation. Material placed on the on the stock piles ranged from 0.5 to 0.65 opt Ag,*

To the knowledge of Silver One, there is no new data available since the calculation of the above historical resource estimate and no additional work has been done to upgrade or verify the historical resource estimate. The qualified person has not done sufficient work to classify the historical estimate as a current mineral resource therefore Silver One is treating these historical estimates as relevant but not current mineral resources.

Silver One Resources Inc.
Management's Discussion and Analysis for the year ended December 31, 2017

SELECTED ANNUAL INFORMATION

The following is a summary of selected audited financial information of the Company for each of the last three fiscal years:

	2017	2016 ¹	2015
	\$	\$	\$
Total revenues	-	-	-
Net loss	(3,062,646)	(1,102,421)	(23,473)
Net loss per share (basic and diluted) ²	(0.04)	(0.02)	(0.00)
Total assets	11,976,255	8,980,178	32,128
Total liabilities	582,918	65,451	14,861

1 The year ended December 31, 2016 covers a 14-month period.

2 The basic and diluted loss per share calculations result in the same amount due to the anti-dilutive effect of outstanding stock options and warrants.

SUMMARY OF QUARTERLY RESULTS

Three months ended (\$)	December 31 2017 ¹	September 30 2017 ²	June 30, 2017 ²	March 31, 2017 ²
Revenues	-	-	-	-
Net loss	(1,817,590)	(473,548)	(434,160)	(337,348)
Net loss per share – (basic and diluted) ⁵	(0.02)	(0.01)	(0.01)	(0.00)
Total assets ⁴	11,976,255	9,118,736	9,496,874	10,001,652

Three months ended (\$)	December 31 2016 ³	October 31 2016 ⁴	July 31 2016	April 30 2016
Revenues	-	-	-	-
Net income (loss)	(172,498)	(849,607)	(56,654)	(18,348)
Net income (loss) per share - (basic and diluted) ⁵	(0.00)	(0.02)	(0.00)	(0.00)
Total assets	8,980,178	9,197,158	363,354	8,144

1 The net loss for the quarter ended December 31, 2017 is mostly due to the writedown of the Pluton property during the quarter of \$1,069,799.

2 The net losses for the quarters ended March 31, 2017, June 30, 2017, and September 30, 2017 result from an increase in corporate activities in connection with the acquisition of KCP and Option Agreement on the Candelaria Project.

3 The December 31, 2016 period is a two-month stub period from November 1, 2016 – December 31, 2016.

4 Net loss for the quarter ended October 31, 2016 is mostly the result of a share-based payment charge as well as an increase in expenses due to the Company's increased activity. Total assets as at October 31, 2016 increased significantly due to the acquisition of KCP and the mineral properties acquired as part of this acquisition.

5 The basic and diluted loss per share calculation results in the same value due to the net loss, and resulting anti-dilutive effect of outstanding options and warrants, or due to there being no options outstanding.

RESULTS OF OPERATIONS

During the year ended December 31, 2017, the Company reported a net loss of \$3,062,646 or \$0.04 per share compared to a loss of \$1,102,421 or \$0.02 per share for the fourteen months ended December 31, 2016. Part of this variance relates to the impairment of the Pluton property of \$1,069,799. Aside from the impairment, the most significant expenses of variance to prior periods are as follows:

Administration and office of \$113,054 (2016 – 28,330)

The increase in administration and office expense is the result of the Company's increased activity and a new office lease entered into during the period.

Consulting fees of \$155,120 (2016 – 20,521)

The increase in consulting fees is the result of the Company's increased activity with the increase in properties and work performed on those properties during the year.

Silver One Resources Inc.

Management's Discussion and Analysis for the year ended December 31, 2017

Exploration and evaluation of \$294,213 (2016 - \$180)

The increase is the result of exploration and evaluation fees relate to the work performed on the eastern Nevada properties before the mineral properties were staked during Q4 2017.

Professional fees of \$119,509 (2016 - \$131,596)

The professional fees remained consistent with the prior year and include legal assistance for general corporate and regulatory matters as well as accounting services.

Salaries and benefits of \$256,896 (2016 - \$58,881)

Salaries and benefits includes fees paid to the Company's President and CEO appointed to the position part way through the prior year, as well as to the investor relations employee.

Share-based payments of \$380,784 (2016 - \$590,969)

The decrease in share-based payments is the result of less options being granted during the period. During 2016 6,589,996 options were granted whereas in 2017 1,375,000 options were granted.

Shareholder communications of \$359,034 (2016 - \$74,856)

The increase in shareholder communications is the result of increased marketing and promotional activities as the Company increases activity.

Travel and related costs of \$256,046 (2016 - \$67,559)

Travel and related costs increased due to the increased travel to the newly-acquired properties, as well as marketing and promotional roadshows.

Quarter ended December 31, 2017

During the three months ended December 31, 2017, the Company reported a net loss of \$1,817,590 or \$0.02 per share compared to a net loss of \$172,498 or \$0.00 per share for the two months ended December 31, 2016. The increased loss was primarily due to the impairment of the Pluton property of \$1,069,799 as well as an increase in corporate activities and the resulting administration, consulting, professional, salaries, and shareholder communication fees. The most significant expenses of variance to prior periods are as follows:

Administration and office of \$39,212 (2016 - \$8,983)

The increase in administration and office expense is the result of the Company's increased activity and a new office lease entered into during the current year.

Consulting fees of \$36,593 (2016 - \$12,696)

The increase in consulting fees is the result of the Company's increased activity with the increase in properties and work performed on those properties during the quarter

Professional fees of \$35,378 (2016 - \$29,977)

The professional fees remained consistent with the prior year and include legal assistance for general corporate and regulatory matters as well as accounting services.

Salaries and benefits of \$73,360 (2016 - \$15,906)

Salaries and benefits expense includes fees paid to the Company's President and CEO appointed to the position during the year, as well as to the investor relations employee.

Share-based payments of \$241,162 (2016 - \$nil)

The increase in share-based payments is the result of the 1,375,000 options granted during 2017. During 2016 6,589,996 options were granted during the year, which vested immediately. Therefore, no share-based payment expense was recorded in the two months ended December 31, 2016 as all options outstanding had already vested.

Silver One Resources Inc.

Management's Discussion and Analysis for the year ended December 31, 2017

Shareholder communications of \$226,411 (2016 - \$37,670)

The increase in shareholder communications is the result of increased marketing and promotional activities as the Company increases activity.

Travel and related costs of \$70,456 (2016 - \$36,123)

Travel and related costs increased due to the increased travel to the newly-acquired properties, as well as marketing and promotional roadshows.

FINANCIAL CONDITION, LIQUIDITY AND CAPITAL RESOURCES

Net working capital including cash

As at December 31, 2017, the Company had \$301,030 in cash, \$3,600,000 in short-term investments, and working capital of \$3,688,122, compared to cash of \$2,423,334 and working capital of 2,408,684 at December 31, 2016. The increase in working capital of \$1,279,438 was primarily due to the \$4,300,000 of gross proceeds provided from the private placements during the year offset by the Company's net loss of \$3,062,646 and mineral property expenditures of \$1,272,331.

Operating activities

Cash used in operating activities for the year ended December 31, 2017 was \$1,462,378 compared to cash used of \$496,874 in the fourteen months ended December 31, 2016. The cash used in operating activities related mostly to an increase in corporate activities related to shareholder communication, travel, and consulting fees, as well as exploration expenditures on the eastern Nevada properties prior to them being staked in Q4 2017.

Investing activities

Cash used in investing activities for the year ended December 31, 2017 was \$4,923,657 compared to cash used of \$57,677 in the fourteen months ended December 31, 2016. The cash used in investing activities increased due mostly to the increase of \$1,239,584 in mineral property expenditures incurred during the year.

Financing activities

Cash provided by financing activities for the year ended December 31, 2017 was \$4,263,731 compared to cash provided of \$2,946,632 in the fourteen months ended December 31, 2016. The cash provided by financing activities during the year ended December 31, 2017 and fourteen months ended December 31, 2016 mostly related to the private placements that occurred during the year.

Capital expenditures

The capital expenditures of the Company during the year ended December 31, 2017 included cash mineral property expenditures of \$902,236 (2016 - \$nil) on the Company's properties in the US, and \$370,095 on the Company's Mexican properties (2016 - \$17,560). Also during the fourteen months ended December 31, 2016, \$15,187 was spent on the Company's Margurete Gold Property, which was written off at the end of 2016.

Liquidity and capital resources

As at December 31, 2017, the Company had a working capital of \$3,688,122. The Company has not yet put into commercial production any of its mineral properties and as such has no operating revenues or cash flows. Accordingly, the Company is dependent on the equity markets as its sole source of operating working capital, and the Company's capital resources are largely determined by the strength of the junior resource capital markets, by the status of the Company's projects in relation to these markets, and its ability to compete for investor support of its projects. There can be no assurance that financing, whether debt or equity, will always be available to the Company in the amount required at any particular time or for any particular period or, if available, that it can be obtained on terms satisfactory to it.

OFF-BALANCE SHEET ARRANGEMENTS

The Company has no off-balance sheet arrangements.

Silver One Resources Inc.

Management's Discussion and Analysis for the year ended December 31, 2017

RELATED PARTY TRANSACTIONS

The Company's related parties consist of the Company's directors and officers, and any companies associated with them. The Company incurred the following charges during the years ended December 31, 2017 and 2016:

Service or item	Twelve	Fourteen
	Months ended December 31 2017	months ended December 31 2016
	\$	\$
Consulting fees	158,208	25,314
Professional fees	51,803	14,280
Salaries and benefits	243,735	59,625
Share-based payments	-	295,749

Consulting fees include amounts paid to Raul Diaz, a director of the Company, for geological consulting services.

Professional fees include amounts paid to Malaspina Consultants Inc., a company owned by Robert McMorran, a former director of the Company, and in which the CFO, Carmen Amezcua Hernandez, is an associate.

Salaries and benefits include amounts paid to Greg Crowe, President and Chief Executive Officer of the Company.

As at December 31, 2017, directors, officers or their related companies were owed \$31,818 (December 31, 2016 - \$12,665) in respect of services. The amounts due to related parties are unsecured, non-interest-bearing and due on demand.

Key management includes directors and executive officers of the Company. Other than the amounts disclosed above, there was no other compensation paid or payable to key management for employee services for the reported periods.

FINANCIAL INSTRUMENTS

Classification of financial instruments

The Company's financial instruments consist of cash, short-term investments, accounts payable and accrued liabilities. The Company classified its cash as loans and receivables. The accounts payable and accrued liabilities are classified as other financial liabilities, which are measured at amortized cost.

The classification of the financial instruments as well as their carrying values as at December 31, 2017 and December 31, 2016 is shown in the table below:

At December 31, 2017	Loans and receivables	Other financial liabilities	Total
	\$	\$	\$
Financial assets			
Cash	301,030	-	301,030
Short-term investments	3,600,000	-	3,600,000
Total financial assets	3,901,030	-	3,901,030
Financial liabilities			
Accounts payable and accrued liabilities	-	539,703	-
Total financial liabilities	-	539,703	-

Silver One Resources Inc.
Management's Discussion and Analysis for the year ended December 31, 2017

At December 31, 2016	Loans and receivables	Other financial liabilities	Total
	\$	\$	\$
Financial assets			
Cash	2,423,334	-	2,423,334
Total financial assets	2,433,843	-	2,433,843
Financial liabilities			
Accounts payable and accrued liabilities	-	65,451	65,451
Total financial liabilities	-	65,451	65,451

Note that the fair values approximate the carrying values due to their short-term nature.

Financial and capital risk management

The Company thoroughly examines the various financial instruments and risks to which it is exposed and assesses the impact and likelihood of those risks. These risks include foreign currency risk, interest rate risk, credit risk, and liquidity risk. Where material, these risks are reviewed and monitored by the Board of Directors.

The Board of Directors has overall responsibility for the determination of the Company's risk management objectives and policies. The overall objective of the Board is to set policies that seek to reduce risk as far as possible without unduly affecting the Company's competitiveness and flexibility.

Discussions of risks associated with financial assets and liabilities are detailed below:

a) Foreign currency risk

The Company is exposed to the financial risk related to the fluctuation of foreign exchange rates. The Company operates in Canada and Mexico and a portion of the Company's expenses are incurred in Canadian dollars ("CAD"), US dollars ("USD"), and Mexican Pesos ("MXN"). A significant change in the currency exchange rates between the Canadian, US and Mexican currencies, could have an effect on the Company's results of operations, financial position or cash flows. The Company has not hedged its exposure to currency fluctuations.

As at December 31, 2016, the Company is exposed to currency risk on the following financial assets and liabilities denominated in USD and MXN. The sensitivity of the Company's net earnings due to changes in the exchange rate between the USD and MXN against the Canadian dollar is included in the table below in Canadian dollar equivalents:

	USD amount	MXN amount	Total
	\$	\$	\$
Cash	23,805	4,462	28,267
Accounts payable and accrued liabilities	(408,464)	(11,258)	(419,722)
Net exposure	(384,659)	(6,796)	(391,455)
Effect of +/- 10% change in currency	(38,466)	(680)	

b) Interest rate risk

Interest rate risk is the risk that the fair value or future cash flows of a financial instrument will fluctuate because of changes in market interest rates. The risk that the Company will realize a cash loss is limited as the Company's liabilities are non-interest bearing. The Company considers this risk to be immaterial.

Silver One Resources Inc.

Management's Discussion and Analysis for the year ended December 31, 2017

c) Credit risk

Credit risk is the risk of an unexpected loss if a customer or third party to a financial instrument fails to meet its contractual obligations. Credit risk arises from cash held with banks and financial institutions. The maximum exposure to credit risk is equal to the carrying value of the financial assets. The Company considers credit risk with respect to its cash to be immaterial as cash is mainly held through large Canadian financial institutions.

d) Liquidity risk

Liquidity risk is the risk that the Company is not able to meet its financial obligations as they become due. The Company manages its liquidity risk by continuously monitoring forecasted and actual cash flows, as well as anticipated investing and financing activities. Accounts payable and accrued liabilities have contractual maturities of 30 days or are due on demand, and are subject to normal trade terms. The Company has working capital of \$3,688,122 as at December 31, 2017.

CRITICAL JUDGMENTS IN APPLYING ACCOUNTING POLICIES

The critical judgments that the Company's management has made in the process of applying the Company's accounting policies with the most significant effect on the amounts recognized in the Company's consolidated financial statements are as follows:

a) Functional currency

The functional currency for each of the Company and its subsidiaries is the currency of the primary economic environment in which the entity operates. Determination of functional currency involves certain judgements to determine the primary economic environment of an entity and this is re-evaluated for each new entity following an acquisition, or if events and conditions change.

b) Impairment of mineral properties

Expenditures on mineral properties are capitalized. The Company makes estimates and applies judgment about future events and circumstances in determining whether the carrying amount of a mineral property exceeds its recoverable amount. The recoverability of amounts shown as mineral properties and deferred exploration costs is dependent upon the discovery of economically recoverable reserves, the Company's ability to obtain financing to develop the properties, and the ultimate realization of profits through future production or sale of the properties. Management reviews the carrying values of its mineral properties on an annual basis, or when an impairment indicator exists, to determine whether an impairment should be recognized. In making its assessment, management considers, among other things, exploration results to date and future exploration plans for a particular property. In addition, capitalized costs related to relinquished property rights are written off in the period of relinquishment. Capitalized costs in respect of the Company's mineral properties may not be recoverable and there is a risk that these costs may be written down in future periods.

The significant estimates applied in determining the recoverable amount of La Frazada includes those used to value the shares to have been received as part of a proposed deal. As the fair market value of the shares to be liquidated would be equal to the cost of buying a put option on those shares at an exercise price equal to the share price at the measurement date, the Black-Scholes model was used to calculate the value of the put option. Within the Black-Scholes model, assumptions were used to calculate the fair value. The significant estimate applied in determining the recoverable amount of Pluton includes the determination of which costs added value to the property.

c) Determining if an acquisition is a business combination or an asset acquisition

With each acquisition, the Company has to determine whether it should be accounted for as a business combination or an asset acquisition. As dictated by IFRS 3, *Business Combinations*, the components of a business must include inputs, processes and outputs. Management has assessed its acquisitions and has concluded that each did not include all the necessary components of a business. As such, they have been recorded as asset acquisitions, being the purchase of mineral properties and/or working capital.

Silver One Resources Inc.

Management's Discussion and Analysis for the year ended December 31, 2017

d) Determining amount and timing of rehabilitation costs

Management must determine if estimates of the future costs the Company will incur to complete the rehabilitation work is required to comply with existing laws, regulations and agreements in place at each exploration site. Actual costs incurred may differ from those amounts estimated. Future changes to environmental laws and regulations could increase the extent of rehabilitation work required by the Company. Management determined at the date of the statement of financial position that no material rehabilitation provisions were required under IAS 37, *Provisions, Contingent Liabilities and Contingent Assets*.

e) Going concern

In preparing these consolidated financial statements on a going concern basis, as is disclosed in Note 1 of the Company's consolidated financial statements, Management's critical judgment is that the Company will be able to meet its obligations and continue its operations for the next twelve months.

KEY SOURCES OF ESTIMATION UNCERTAINTY

The preparation of consolidated financial statements requires that the Company's management make assumptions and estimates of effects of uncertain future events on the carrying amounts of the Company's assets and liabilities at the end of the reporting period. Actual results may differ from those estimates as the estimation process is inherently uncertain. Actual future outcomes could differ from present estimates and assumptions, potentially having material future effects on the Company's consolidated financial statements. Estimates are reviewed on an ongoing basis and are based on historical experience and other facts and circumstances. Revisions to estimates and the resulting effects on the carrying amounts of the Company's assets and liabilities are accounted for prospectively.

The significant assumptions about the future and other major sources of estimation uncertainty as at the end of the reporting period that have a significant risk of resulting in a material adjustment to the carrying amounts of the Company's assets and liabilities are as follows:

a) Deferred income taxes

Deferred income tax assets and liabilities are measured using enacted or substantively enacted tax rates at the reporting date in effect for the period in which the temporary differences are expected to be recovered or settled. The effect on deferred income tax assets and liabilities of a change in tax rates is recognized as part of the provision for income taxes in the period that includes the enactment date. The recognition of deferred income tax assets is based on the assumption that it is probable that taxable profit will be available against which the deductible temporary differences can be utilized.

b) Share-based payments

Share-based payments are determined using the Black-Scholes option pricing model based on estimated fair values of all share-based awards at the date of grant and are expensed to the statement of loss and comprehensive loss over each award's vesting period. The Black-Scholes option pricing model utilizes subjective assumptions such as expected price volatility, expected life of the option, risk free interest rates, and forfeiture rates. Changes in these input assumptions can significantly affect the fair value estimate.

ACCOUNTING STANDARDS ISSUED BUT NOT YET APPLIED

The following new standard has been issued but not yet applied. The Company is currently evaluating the impact of these standards on its consolidated financial statements.

IFRS 9 – Financial Instruments

In July 2014, the IASB issued the final version of IFRS 9, *Financial Instruments* ("IFRS 9") bringing together the classification and measurement, impairment and hedge accounting phases of the IASB's project to replace IAS 39, *Financial Instruments: Recognition and Measurement*. IFRS 9 retains but simplifies the mixed measurement model and establishes two primary measurement categories for financial assets: amortized cost and fair value. IFRS 9 also amends some of the requirements of IFRS 7, *Financial Instruments: Disclosures*,

Silver One Resources Inc.

Management's Discussion and Analysis for the year ended December 31, 2017

including added disclosures about investments in equity instruments measured at fair value in other comprehensive income, and guidance on financial liabilities and the de-recognition of financial instruments. The mandatory effective date of IFRS 9 will be annual periods beginning on or after January 1, 2018, with early adoption permitted. The Company is in the process of determining the impact of IFRS 9 on its financial statements.

IFRS 15 - Revenue from Contracts with Customers

The new IFRS 15, *Revenue from Contracts with Customers* standard contains a single model that applies to contracts with customers and two approaches to recognizing revenue: at a point in time or over time. New estimates and judgmental thresholds have been introduced, which may affect the amount and/or timing of revenue recognized. This amendment will be mandatory for reporting periods beginning on or after January 1, 2018.

IFRS 16 – Leases. IFRS 16 Leases will replace IAS 17 Leases

This standard introduces a single lessee accounting model and requires a lessee to recognize assets and liabilities for all leases with a term of more than twelve months. A lessee is required to recognize a right-of-use asset representing its right to use the underlying asset and a lease liability representing its obligation to make lease payments. The standard will be effective for annual periods beginning on or after January 1, 2019.

SECURITIES OUTSTANDING

Authorized share capital: The Company can issue an unlimited number of common shares with no par value.

Issued and Outstanding Common Shares as at April 23, 2018				97,217,249
	Expiry date	Exercise Price	Number	
Options	August 5, 2021	\$0.05	4,217,496	
	August 31, 2021	\$0.33	930,000	
	December 2, 2021	\$0.85	100,000	
	April 27, 2022	\$0.58	575,000	
	June 15, 2022	\$0.57	200,000	
	October 4, 2022	\$0.45	200,000	
	October 24, 2022	\$0.45	200,000	
Warrants	October 23, 2020	\$0.60	5,375,000	
Fully Diluted				109,014,745

Escrow shares

Pursuant to the regulatory requirements as at December 31, 2017, 1,305,000 issued and outstanding common shares were held in escrow under the CPC Escrow Agreement (December 31, 2016 - 1,957,500). Under the CPC Escrow Agreement 10% of the shares were released on the issuance of the Final Exchange Bulletin on August 4, 2016 (the "Initial Release"). An additional 15% will be released every 6 months following the Initial Release.

DISCLOSURE OF CONTROLS AND PROCEDURES

In connection with National Instrument 52-109 (Certificate of Disclosure in Issuer's Annual and Interim Filings) ("NI 52-109"), the Chief Executive Officer and Chief Financial Officer of the Company have filed a Venture Issuer Basic Certificate with respect to the financial information contained in the annual consolidated financial statements for the year ended December 31, 2017 and this accompanying MD&A (together, the "Annual Filings").

Silver One Resources Inc.

Management's Discussion and Analysis for the year ended December 31, 2017

In contrast to the full certificate under NI 52-109 the Venture Issuer Basic Certificate does not include representations relating to the establishment and maintenance of disclosure controls and procedures and internal control over financial reporting, as defined in NI 52-109. For further information, the reader should refer to the Venture Issuer Basic Certificates filed by the Company with its filings on SEDAR at www.sedar.com.

RISKS AND UNCERTAINTIES

Financing risks

The Company has incurred significant losses since inception. The continued operations of the Company are dependent on its ability to generate future cash flow and obtain additional financing. The Company has traditionally financed its cash requirements through the issuance of common shares. If the Company is unable to generate cash from operations or obtain additional financing its ability to continue as a going concern could be impeded.

Exploration and development

Resource exploration is a speculative business and involves a high degree of risk. There is no known body of commercial ore on the Company's mineral properties and there is no certainty that the expenditures made by the Company in the exploration of its mineral properties or otherwise will result in discoveries of commercially recoverable quantities of minerals. The exploration for and development of mineral deposits involves significant risks, which even a combination of careful evaluation, experience and knowledge may not eliminate. Although the discovery of an ore body may result in substantial rewards, few properties explored are ultimately developed into producing mines. It is impossible to ensure that the current exploration programs planned by the Company will result in a profitable commercial mining operation.

There is no assurance that the Company's mineral properties possess commercially mineable bodies of ore. The Company's mineral properties are in the exploration stage as opposed to the development stage and has no known body of economic mineralization. The known mineralization of the properties has not been determined to be economic ore and there can be no assurance that a commercially mineable ore body exists on the properties. Such assurance will require completion of final comprehensive feasibility studies and, possibly, further associated exploration and other work that concludes a potential mine is likely to be economic. In order to carry out exploration and development programs of any economic ore body and place it into commercial production, the Company may be required to raise substantial additional funding.

Title of mineral properties

There is no assurance that the Company's title to its properties will not be challenged. Title to and the area of mineral properties may be disputed. While the Company has diligently investigated title to its properties, it may be subject to prior unregistered agreements or transfers or indigenous land claims to which title may be affected. Consequently, the boundaries may be disputed.

Option agreements

The Company is currently earning some of its interests in its mineral properties through option agreements and acquisition of title to the property is only completed when the option conditions have been met. These conditions generally include making option payments and incurring exploration expenditures on the properties. If the Company does not satisfactorily complete its option conditions in the time frame laid out in the option agreement, the Company's title to the mineral property will not vest and the Company will have to write-down the previously capitalized costs related to that property.

Unknown environmental risks for past activities

Exploration and mining operations involve a potential risk of releases to soil, surface water and groundwater of metals, chemicals, fuels, liquids having acidic properties and other contaminants. In recent years, regulatory requirements and improved technology have significantly reduced those risks. However, those risks have not been eliminated and the risk of environmental contamination from present and past exploration or mining activities exists for mining companies. Companies may be liable for environmental contamination and natural resource damages relating to properties that they currently own or operate or at which environmental

Silver One Resources Inc.

Management's Discussion and Analysis for the year ended December 31, 2017

contamination occurred while or before they owned or operated the properties. However, no assurance can be given that potential liabilities for such contamination or damages caused by past activities at these properties do not exist.

Political regulatory risks

Any changes in government policy may result in changes to laws affecting ownership of assets, mining policies, monetary policies, taxation, rates of exchange, environmental regulations, labour relations, repatriation of income and return of capital. This may affect both the Company's ability to undertake exploration and development activities in respect of present and future properties in the manner currently contemplated, as well as its ability to continue to explore, develop and operate those properties in which it has an interest or in respect of which it has obtained exploration and development rights to date. The possibility that future governments may adopt substantially different policies, which might extend to expropriation of assets, cannot be ruled out.

FORWARD-LOOKING INFORMATION

The Company's annual consolidated financial statements for the fourteen months ended December 31, 2016, and this accompanying MD&A, contain statements that constitute "forward-looking statements" within the meaning of National Instrument 51-102, Continuous Disclosure Obligations of the Canadian Securities Administrators. It is important to note that, unless otherwise indicated, forward-looking statements in this MD&A describe the Company's expectations up to the date of the MD&A.

Forward-looking statements often, but not always, are identified by the use of words such as "seek", "anticipate", "believe", "plan", "estimate", "expect", "targeting" and "intend" and statements that an event or result "may", "will", "should", "could", or "might" occur or be achieved and other similar expressions. Forward-looking statements in this MD&A include statements regarding the Company's future plans and expenditures, the satisfaction of rights and performance of obligations under agreements to which the Company is a part, the ability of the Company to hire and retain employees and consultants and estimated administrative assessment and other expenses. Forward-looking statements involve known and unknown risks, uncertainties, assumptions and other factors that may cause the actual results, performance or achievements of the Company to be materially different from any future results, performance or achievements expressed or implied by the forward-looking statements. Factors that could cause the actual results to differ include market prices, continued availability of capital and financing, inability to obtain required regulatory approvals and general market conditions. These statements are based on a number of assumptions, including assumptions regarding general market conditions, the timing and receipt of regulatory approvals, the ability of the Company and other relevant parties to satisfy regulatory requirements, the availability of financing for proposed transactions and programs on reasonable terms acceptable to the Company and the ability of third-party service providers to deliver services in a timely manner. Some of these risks and uncertainties are identified under the heading "**RISKS AND UNCERTAINTIES**" as disclosed elsewhere in this MD&A. Additional information regarding these factors and other important factors that could cause results to differ materially may be referred to as part of particular forward-looking statements.

Forward-looking statements contained herein are made as of the date of this MD&A and the Company disclaims any obligation to update any forward-looking statements, whether as a result of new information, future events or results or otherwise except as required by securities law. There can be no assurance that forward-looking statements will prove to be accurate, as actual results and future events could differ materially from those anticipated in such statements. Accordingly, readers should not place undue reliance on forward-looking statements.

Silver One Resources Inc.

Management's Discussion and Analysis for the year ended December 31, 2017

OUTLOOK

Silver One's aim is to become a premier silver exploration and development company. The Company has an option agreement with SSR to acquire 100% of their interest in the past silver producing Candelaria Mine in Nevada. The company also holds three high-quality Mexican silver projects acquired from First Mining Finance. These properties include Peñasco Quemado in the state of Sonora, La Frazada in the state of Nayarit, and Pluton in the state of Durango. Ultimately, the Company's goal is to focus on identifying, acquiring, and exploring silver properties.

As the Company incurs additional retention and exploration expenditures, the Company will likely need to access additional capital. On October 23, 2017, the Company closed a private placement by issuing 10,750,000 units at a price of \$0.40 per unit for gross proceeds of \$4,300,000. In 2017 and into 2018, the Company intends to add shareholder value through further potential acquisitions of companies and/or properties and organically through the continued exploration of its current mineral property holdings.

QUALIFIED PERSONS

Greg Crowe, P. Geo, President, CEO and Director of the Company, is a Qualified Person as defined in National Instrument 43-101 Standards of Disclosure for Mineral Projects, and is responsible for the review of technical information in the MD&A.

OTHER INFORMATION

Additional information relating to the Company can be found on SEDAR at www.sedar.com or on the Company's website at www.silverone.com.
